

RegimA Medical Facial Peel & Cosmeceutical range

Tackling the visible signs of ageing

After Care Instructions

After your peel you may experience redness, puffiness & tightness. This is perfectly normal and in most cases will subside after a day or so. As RegimA works differently to most other peels, not all skins will flake and peel, but flaking & peeling is not an indication of its success. Due to its unique nanotechnology it has the ability to work through to deeper layers of the skin so all the action does not happen on the surface. Rest assured it is working!

It is essential for the success of your Peel & Heal course that you only apply RegimA products to your skin afterwards. These products contain vital ingredients that continue the Peel & Heal process in between your visits. Your therapist will carefully choose the most beneficial products for you and give you clear instructions as to how to use them on your skin. As you go through the course your therapist will prescribe further products to add into your regime and it is important that you follow these instructions exactly. Failure to commit to the complete RegimA program will affect the results.

RégimA Peel & Heal will not make the skin sun sensitive, it will not lead to pigmentation and it will not thin the skin.

The secret is within the formulation
